Highly Developed Websites Hosted on Github

History

The history of the internet website was created to highlight how the concept of the internet began the website was made using bootstrap, and programmed with JetBrains WebStorm. Likewise, WebStorm is a useful tool to program HTML websites because it highlights errors in HTML code. The Website is hosted on Github which is a platform where programmers can upload programs and pieces of code for the general public to view.

Website made in collaboration with Elijah K

InternetWorks

This website was created to highlight how the internet functions and what internet websites can do with customer data

This website was also developed using JetBrains WebStorm, the website uses numerous HTML functions
to make viewing the site easier, the website neatly has it's sections divided into the top left hand navigation bar and the the website seamlessly scrolls when a person browsing the site scrolls up or down.
A personal goal for why I would like to code HTML is to make browsing websites a more convenient process
so people browsing the internet do not encounter website errors and can browse a functional user interface.
